

# Backup VMs with AUCloud: it's easy, efficient and secure

AUCloud Back-up-as-a-Service (BaaS) is a cost-effective way to provide enhanced protection of operational data at the OFFICIAL and PROTECTED security levels.

AUCloud BaaS allows customers to backup AUCloud hosted VMs and provides a highly secure external backup target for your on-premise VMs and data. With AUCloud BaaS you can restore complete VMs or individual files and folders from VMs.

Depending on your disaster recovery and business continuity requirements, you should also consider the AUCloud Disaster Recovery service. You can realise significant cost savings when using both.

## Scalable, elastic cloud that's secured to PROTECTED

### Scalable cloud

Manage backup, retention and restoration holistically through AUCloud's feature-rich, user-friendly portal, which gives visibility of which VMs are protected and enables the definition of detailed backup policies.

### Enhanced protection

AUCloud Backup facilitates Recovery Point Objective (RPO) and can be as low as minutes while Recovery Time Objective (RTO) is dependent on how quickly your administrator can recover and reinstate the VMs.

### Secured to PROTECTED

You can rely on the sovereign security posture of AUCloud to ensure data integrity. AUCloud is engineered to 'PROTECTED', IRAP certified and secured with industry-leading protective security monitoring.

## Use Cases

- Protect data from accidental deletion
- Restore lost or corrupted data
- Backup VMs or files and folders from VMs
- Backup AUCloud hosted VMs
- Backup VMs and data to secure external target
- Meet legal and data compliance requirements

## Simple, transparent pricing

AUCloud BaaS is a complete security solution that complies with the requirements of the ASD ISM.

### Pay only for what you use:

- **Licensing:** VM/month fee
- **Storage:** GB/month rate

### Price includes:

- Data ingress and egress
- Internet connectivity on a shared connection
- Load balancing and firewalling (Edge Service Gateway)

## AUCloud Backup-as-a-Service

### Features

- Backup data stored in sovereign, IRAP certified cloud
- Simple to use industry leading portal
- One license for BaaS and DRaaS
- Data can be tiered to low cost AUCloud object storage
- RTO and RPO, as low as a few minutes
- Integration with VMware vCloud Director

### Benefits

- A familiar administrative console that allows fine grained control over backups and policies
- Enables individual file tracking and restoration in bulk or individually
- Allows you to automate tasks using the Restful API
- Most recent backups can be stored on high performance storage and longer term backups moved to lower cost object storage.
- Enables a single solution for backup and disaster recovery
