

# Build your Sovereign Resilience

## Seven reasons, with tangible benefits, to move to Sovereign Cloud Infrastructure-as-a-Service (IaaS)

### 1. Flexibility + Agility

Swapping your data centre and on-premise infrastructure for cloud IaaS enables you to respond to your user demands more quickly and efficiently and add new services without expensive capital expenditure, lengthy builds and costly, risky project deliverables.

### 2. Scale up (or down) capacity on demand

'Right-sizing' your infrastructure from the outset ensures you only purchase what you need – BUT with the confidence you can scale up when you need more capacity.

### 3. Only pay for what you need

With pay-as-you-need cloud IaaS you only pay for what you use. You can save 50%-60% of IT costs simply by turning off VMs overnight or on weekends when you're not using them.

The instant scalability, elasticity, infrastructure pooling and agility of cloud IaaS translates to your ability to:

- Do more with less
- Deliver value more quickly
- Develop adaptability and build resilience

### 4. Business continuity

Sovereign Cloud IaaS ensures your data is protected in a secure, geo-resilient location with the ability to access your data quickly with minimal downtime or loss of productivity.

### 5. Security

Cloud IaaS provides a range of advanced security features, regularly updated, to protect the security of your data. The Cloud Assessment and Authorisation Framework released by ACSC in July 2020 advises that - used effectively, cloud services can reduce the risk posture as compared with self-managed (on-premise) arrangements.

### 6. Privacy

Sovereign Cloud IaaS puts the privacy of your data beyond the legal jurisdiction of other nations. Guaranteed.

### 7. Accelerate and de-risk innovation

Innovation is cheaper - ideas can be tested quickly, without expensive physical infrastructure. Cheaper innovation is less risky, easier to justify and enables you to achieve more with the same budget.
