

CYBER SECURITY HEALTH ASSESSMENT

Is your organisation prepared to face today's cyber security and business continuity challenges?

AUCloud's Cyber Security Health Assessment offers your organisation a comprehensive security review, detailed gap analysis and report outlining any vulnerabilities and offers key recommendations to help build cyber security resilience.

Our assessment and report identifies key risk areas for your business through a comprehensive evaluation process involving a robust audit by a senior security analyst.

Our team formulates a report in line with the latest security frameworks to provide you a clear picture of your current security posture, and practical advice on how to be more cyber resilient.

Detailed Cyber Security Health Assessment & Report:

1. A comprehensive review and assessment of current your organisation by a senior security expert.
2. A detailed consultation and report with an analysis against the latest Australian security frameworks.
3. A one-on-one meeting with our security team to discuss findings, recommendations and next steps.

Cyber Security Assessment and Report covers:

Governance + Policies

Cyber threats are constantly evolving. Our team uncovers if your organisation adheres to a security framework and have documented procedures in place to deal with emerging cyber threats.

Risk Management

Does your organisation regularly conduct risk assessments to identify vulnerabilities? Our team explores whether there are formal processes in place to assess and prioritise risks.

Security Training

This assessment uncovers whether your organisation conducts regular cyber security training and if your team is well-prepared to respond to cyber incidents.

Network Security

Our team reviews your security policies and procedures, running compliance checks to ensure adherence to industry regulations and standards.

Data Protection + Resilience

This examines how data is stored, transmitted, and processed, ensuring encryption and other data protection measures are in place to safeguard information.

Incident Response Planning

Our team discusses strategies to effectively detect, respond to, and recover from cyber security incidents. Looking at a proactive approach to minimise the impact of potential breaches.
